

ARTOSI GLASS SLIDING FRAME GLAZING SYSTEM

We keep innovating the ARTOSI aluminium bioclimatic pergola. In addition to the ALFA and ALFA PLUS screen roller blinds, it is now possible to implement the ARTOSI GLASS sliding frame glazing system to the pergola sides.

The sliding frame system consists of aluminium profiles and glazing. The system features slide opening, i.e., the individual wings slide one behind the other. You can order two- to six-wing version of the system. The special shape of the vertical profile also serves as a handle over its whole length, the glass used is transparent tempered glass of 6 mm thickness.

The system can be equipped with a metallic lockable handle with a cylindrical inlay, safely separating the terrace and the garden and protecting against burglary.

The ARTOSI GLASS sliding frame system is made from high-quality aluminium profiles and stainless components. The glass used is safety tempered glass of 6 mm thickness, which allows glazing over areas up to the height of 2.7 metres.

The system may be supplied coated using a complete RAL colour range, with anodised surface treatment. You can therefore fully tone the glazing system with your ARTOSI pergola as well as the ALFA screen roller blind.

The system is advantageous thanks to the fast and simple installation and maintenance. All you need to do for smooth running is keeping the lower rail clean. Free access to the wings facilitates easy maintenance of the glass.

Advantages

- protects from noise, dust and bad weather
- obstruction against forced entry
- colour matching with the ARTOSI pergola as well as the ALFA screen roller blind
- locks against glass removal
- easy installation thanks to pre-assembled system
- easy and fast operation and maintenance
- selection of the number of wings and method of opening

Dimensions

- wing width: 50–100 cm, max. height: 270 cm
- max. width of the glazed area: 6 m
- possible combinations: 2D–5D, or 2×2D–2×3D
- weight: 20 kg/m² (in case of glass thickness of 6 mm)
- 47 kg / running metre (in case of glass thickness of 6 mm and glazing height of 2.7 m)

Number of wings

2x 2D

2x 3D

Method of opening

One-sided (opening to the left/right)

Double-sided (curtain type)
